

Final Project

ECO 32500-001, Spring 2024

Instructor: Alec Malstrom

Draft Presentations: Wednesday, May 1, 2024 (during class)

Final Presentations: Monday, May 20, 2024

Project Structure

For this project, you'll be asked to perform analysis, using both data that's been provided to you and data that you source yourself, to create a report detailing opportunities for our organization, including charts and graphs that support your proposal. You'll work in teams of two or three to gather, prepare, and analyze the data and develop insights that you will present to me. You will have a chance to present a draft of your presentation to me a few weeks before the final presentation is due, where we'll discuss improvements that can be made before the final presentation. This project will be an opportunity for you to apply the Analytical Process, demonstrating your ability to turn data into meaningful insights.

Prompt

I am your VP of Sales and have presented you with the following question: I am looking to improve this year's performance – what suggestions do you have for success?

Requirements

- You are required to use the data provided to you on our remote server. You are also encouraged to use any reputable data source that you find relevant (and free).
- You are required to use both SQL and Python. You are encouraged to use additional business intelligence tools (like Tableau, PowerBI, Looker, Excel, PyPlot, etc).
- You will be required to work in teams of two or three.
- You are required to make a five minute presentation of your findings to me, which will be followed by questions. You will make the presentation, first at the beginning of May, then again at the end of the semester after incorporating my feedback.

Grading

In total, the project will account for 50% of your final grade. The grading for the project will be as follows:

- 25% of the project grade will be based on your first draft
- 75% of the project grade will be based on the final presentation

Logistics

Both your draft presentation and your final presentation will be scheduled with me in advance. The final analysis, including data you've sourced yourself and any reports or artifacts your produce, will be turned in to me on GitHub. You should feel free to use any class resources (like Slack) to collaborate.
